### Abstract of JP 11155110 (A)

**PROBLEM TO BE SOLVED:** To provide a program list display device by which an entire program list is displayed in a list form and detailed information with respect to a desired program is displayed in an easily understandable way and to provide its method. **SOLUTION:** A mouse cursor 100 is moved to a name of program the detailed information of which is desired to be displayed among names of programs which are included in a program list displayed on a display device 9, and a mouse button is clicked. The program list is displayed, while being magnified in a channel axis direction and a time base direction corresponding to a display column of the program name. As a result, the space of the display column of the program is extended, and the detailed information with respect to the program together with the program name is displayed on the extended display column.
